Week1- Lecture Topics

Native, Hybrid and web apps

Quick recap of technologies – development environments and SDK

The Internet, World Wide Web, and Markup

Markup – HTML / HTML5

Goals

- Design / UX / Storyboard / Content
- Mobile app and web development
- Development tools, technologies, and standards
- Coding, debugging, and programming
- Production process of new mobile apps
- Bring it together in a final project
- Strong foundation for future work

The Course

Markup (XHTML, HTML, HTML5) Style (CSS) Functionality (JavaScript CSS3 / HTML5) Functionality (JavaScript frameworks) Mobile Functions (jQuery and jQuery Mobile) Geolocation Native wrapping (PhoneGap) Optimizing app performance Packaging app for release in app stores

The Future Of Mobile Development: HTML5

The Web is no longer limited to our desktops and laptop PCs 2013

Business Insider Slides

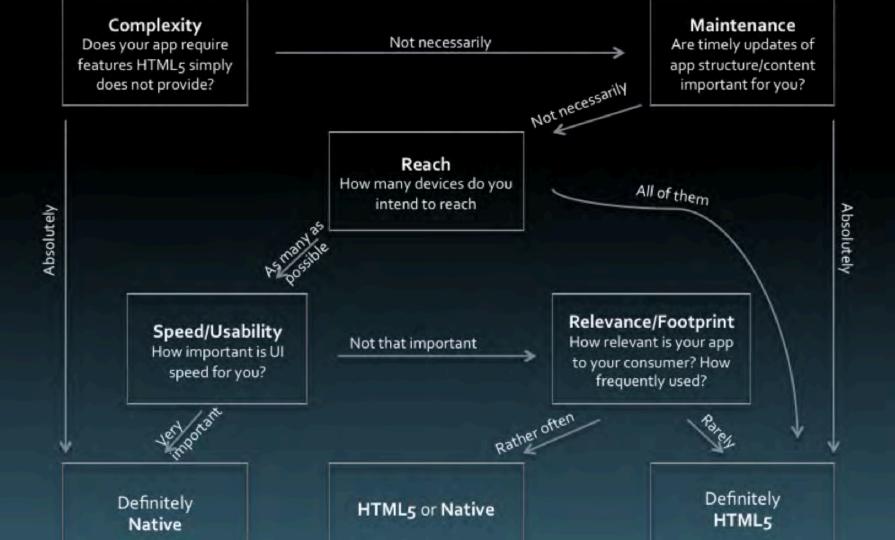

Native Aps vs Web Apps

- Takes advantage of smart phone functionality / hardware (camera, GPS, scan feature, etc.)
- Personalization is important
- Complex/unique/tailored design and UI
- Monetized content / potential purchases
- Massive data transfer

- Limited budget (quicker to develop and deploy)
- Search Engines Optimization (visibility and traffic increase)
- App store approval
- No frequent painful updates
- Universal accessibility (cross platform/device distribution)
- Requires very little device
 knowledge

Web vs Native

App:

How many platforms do you want to support? How important is performance? How important is the user experience? Which hardware APIs do you need access to? Team:

> How many codebases do you want to have? What languages/technologies do you know? How much money do you want to spend?

Web + Native = Hybrid Apps

Quick Recap of Technologies - Web

Source: Internet World Stats - www.internetworldstats.com/stats.htm Basis: 2,405,518,376 Internet users on June 30, 2012 Copyright © 2012, Miniwatts Marketing Group

The Internet

66% of American adults have broadband at home. 82% of American adults use the Internet Over 1000 million Internet hosts as of Jan 2013, <u>ISC Internet Domain Survey</u>

The Internet Traffic Types

Web – HTTP Video - RTMP - RTSP Email - SMTP

- POP

– IMAP

File Transfer – FTP – SFTP – FTP over SSH

Login – Telnet – SSH

School of Design

World Wide Web Features

- HyperText Information System
- Cross-Platform and Cross-Device
- Distributed Around 187 million active sites as of January 2013.
- Open Standards Internet, TCP/IP, HTTP, (X)HTML, CSS, Javascript
- Open Source Apache HTTP Server, Mosaic, Netscape, Firefox, JavaScript, Perl, PHP, etc.
- Web Browser: provides a single interface to many services Information, Communication, Shopping, Banking, ...
- Dynamic, Interactive, Evolving

XHTML 1.1

XHTML (Extensible Hyper Text Markup Language) is a family of XML markup languages that extend the widely used Hypertext Markup Language (HTML), the language in which web pages are written.

XHTML- Extensible Hyper Text Markup Language

<1DOCTYPE html PUBLIC "-//W3C//DTD XHTML+RDFa 1.0//EN" "http://www.w3.org/MarkUp/DTD/xhtml-rdfa-1.dtd"> <html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en" version="XHTML+RDFa 1.0" dir="ltr" xmlns:content="http://purl.org/rss/1.0/modules/content/" xmlns:dc="http://purl.org/dc/terms/" xmlns:foaf="http://xmlns.com/foaf/0.1/" xmlns:og="http://ogp.me/ns#" xmlns:rdfs="http://www.w3.org/2000/01/rdf-schema#" xmlns:sioc="http://rdfs.org/sioc/ns#" xmlns:sioct="http://rdfs.org/sioc/types#" xmlns:skos="http://www.w3.org/2004/02/skos/core#" xmlns:xsd="http://www.w3.org/2001/XMLSchema#"> <head profile="http://www.w3.org/1999/xhtml/vocab"> <meta http-equiv="Content-Type" content="text/html; charset=utf-8" /> // <link rel="shortcut icon" href="http://cada.uic.edu/sites/default/files/favicon.png" type="image/png" /> <link rel="shortlink" href="/node/36" /> <link rel="canonical" href="/design" /> <meta name="Generator" content="Drupal 7 (http://drupal.org)" /> <title>School of Design | cada.uic.edu | </title> <style type="text/css" media="all">@import url("http://cada.uic.edu/modules/system/system.base.css?mw7iq5"); @import url("http://cada.uic.edu/modules/system/system.menus.css?mw7iq5"); @import url("http://cada.uic.edu/modules/system/system.messages.css?mw7ig5"); @import url("http://cada.uic.edu/modules/system/system.theme.css?mw7iq5");</style> cstyle type="text/css" media="all">@import url("http://cada.uic.edu/modules/comment.comment.css?mw7ig5"); @import url("http://cada.uic.edu/modules/field/theme/field.css?mw7ig5"); @import url("http://cada.uic.edu/modules/node/node.css?mw7ig5"); @import url("http://cada.uic.edu/modules/search/search.css?mw7ig5"); @import url("http://cada.uic.edu/modules/user/user.css?mw7ig5"); @import url("http://cada.uic.edu/sites/all/modules/views/css/views.css?mw7ig5");</style> <style type="text/css" media="all">@import url("http://cada.uic.edu/sites/all/modules/ctools/css/ctools.css?mw7ig5"); @import url("http://cada.uic.edu/sites/all/modules/eventwork/css/custom.css?mw7ig5");</style> <style type="text/css" media="all">@import url("http://cada.uic.edu/sites/all/themes/cadaweb/assets/css/style.css?mw7iq5"); @import url("http://cada.uic.edu/sites/all/themes/cadaweb/assets/css/typography.css?mw7ig5"); @import url("http://cada.uic.edu/sites/all/themes/cadaweb/assets/css/layout.css?mw7iq5"); %% @import url("http://cada.uic.edu/sites/all/themes/cadaweb/assets/css/component.css?mw7ig5");</style> style type="text/css" media="print">@import url("http://cada.uic.edu/sites/all/themes/cadaweb/assets/css/print.css?mw7iq5");</style> 31 // <!--/if It IE 71> /// // </[endif]--> 410 <1-- dropdown menu --> 4.4 <script type="text/javascript" src="http://cada.uic.edu/sites/all/themes/cadaweb/assets/js/modernizr.custom.js"></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></screents///script></script></script>< <script type="text/javascript"> var timeout = 10:

XHTML- Document Structure

<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML+RDFa 1.0//EN" "http://www.w3.org/MarkUp/DTD/xhtml-rdfa-1.dtd">

<html>

<head>

<title>School of Design | cada.uic.edu | </title> </head> <body> <!-- content goes here --> </body> </html>

XHTML vs HTML

Document Structure

XHTML <! DOCTYPE > is mandatory The XML namespace attribute in <html> is mandatory <html>, <head>, <title>, and <body> is mandatory XHTML Elements XHTML elements must be properly nested XHTML elements must always be closed XHTML elements must be in lowercase XHTML documents must have one root element XHTML Attributes

> Attribute names must be in lower case Attribute values must be quoted Attribute minimization is forbidden

History of HTML

Tim Berners-Lee developed html in 1992 while at CERN, the European Laboratory for Particle Physics in Geneva in Switzerland.

He is currently the Director of the World Wide Web Consortium, the group that sets technical standards for the Web.

HTML Evolution by Badr - http://www.ferrassi.com/2013/10/html-brief-history/

HTML5 : Past, Present & Future Web and Mobile Applications

5

Timeline of Web Technologies

HTML5 Game Example

a collection of platform-independent markup tags that define the various components of a World Wide Web document

allows you to format text, add rules, graphics, sound, and video and save it all in a text only file that any computer can read and view this file in the Browser

Any HTML file is called document and it has an extension .html HTML documents can contain links to other HTML documents or to practically any information on the Internet

HTML uses tags are commands (keywords) enclosed in less than < and greater than > signs.

Example:

Many tags have special attributes hat offer a variety of options for the contained text.

Example:

Attributes often have values: Example:

HTML browsers ignore any extra space that exist between the tags in your document.

Tags are usually come in pairs: opening and closing tag.

Example:

 opening tag closing tag

Link Element UIC

Opening Tag UIC Element UIC Attribute UIC Attribute Value UIC Content UIC Closing Tag UIC

HTML Nesting

CORRECT

UIC

INCORRECT UIC

XHTML- Document Structure - School of Design

- <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML+RDFa 1.0//EN" "http://www.w3.org/MarkUp/DTD/xhtml-rdfa-1.dtd">
- <html>
 - <head>
- <title>School of Design | cada.uic.edu | </title> </head> <body> <!-- content goes here --> </body> </html>

HTML– Document Structure

```
<!DOCTYPE html >
<html>
 <head>
   <title> Document Title </title>
 </head>
  <body>
         <!-- content goes here -->
 </body>
</html>
```

HTML5- Page Setup Requirements

<!DOCTYPE html > XHTML5 DTD for the <!doctype> tag.

<?xml version="1.0" encoding="UTF-8" ?> XML declaration

HTML5- Page Setup Requirements

The next line of code should be the opening <html> tag. The <html> tag in every document should always be

<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en" lang="en">

- xmlns specifies the XML namespace for a document.
- xml:lang specifies the contents and attributes as English and is a required accessibility standard.
- lang specifies the content of a tag as English and is a required accessibility standard.

HTML5- Page Setup Requirements

<meta charset="utf-8" /> between the <head> and </head> tags, placed <meta> tag

The encoding type (UTF-8) should match the encoding in the XML declaration above.

HTML5– Validators

Validation is a good way to make sure that u writing correct HTML5 code Some portion of HTML5 have some new semantics available which require validation

The Total Validator tool is pretty handing for validating HTML5 http://www.totalvalidator.com/tools/index.html

W3C Markup validation service http://validator.w3.org/

Validator.nu http://html5.validator.nu/

HTML5– Validators

There are a few validator add-ons to the browsers, some do HTML5 well, others do not. Firefox install add-ons:

Firebug https://getfirebug.com/

HTML Validator https://addons.mozilla.org/en-US/firefox/addon/html-validator/

HTTPFox JavaScript Debugger Web Developer

HTML- Document Structure - tabbing

```
<!DOCTYPE html >
<html>
   <head>
         <title> Document Title </title>
   </head>
   <body>
         <!-- content goes here -->
   </body>
</html>
```

HTML- Headings

<h1> This is a Main Heading </h1> <h2> This is a Level 2 Heading </h2> <h3> This is a Level 3 Heading </h3> <h4> This is a Level 4 Heading </h4> <h5> This is a Level 5 Heading </h5> <h6> This is a Level 6 Heading </h6>

HTML- Paragraph and Line Break

This is a paragraph

 This is a new line of text

HTML- Bold & Italic & Underlined

 This is bold text

<i> This is italic text </i>

<u> This is underlined text </u>

HTML- Horizontal Rule

<hr />

horizontal rule- can be used to separate text

This is strong text inside a paragraph

 This is emphasized word

HTML- Definition List

<dl> Definition List opening tag <dt> Definition Term </dt> <dd> Definition </dd> <dt> HTML</dt> <dd> Hyper Text Markup Language </dd> </dl>

HTML

Hyper Text Markup Language

Ordered - numbers

Unordered – bullets

Definition – used to define terminology

opening tag

closing tag

<a> - link tag href – attribute = hyper text reference "http://www.uic.edu" – value UIC – content – user clicks on it

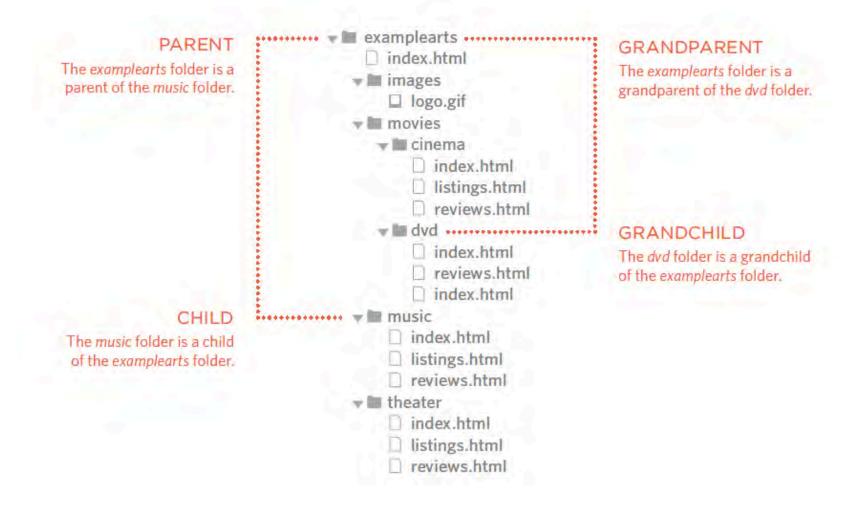

link to home page

Links to other webpages on the same website Provide a shortcut for the browser to find your webpage

- No protocol specified
- No domain name specified
- No www specified

HTML- Relative Links

Relative Link Type

Same Folder

To link to a file in the same folder, just use the file name. (Nothing else is needed.)

Child Folder

For a child folder, use the name of the child folder, followed by a forward slash, then the file name.

Grandchild Folder

Use the name of the child folder, followed by a forward slash, then the name of the grandchild folder, followed by another forward slash, then the file name.

Example

To link to music reviews from the music homepage: Reviews

To link to music listings from the homepage: Listings

To link to DVD reviews from the homepage:

HTML- Relative Links

Relative Link Type

Parent Folder

Use ../ to indicate the folder above the current one, then follow it with the file name.

Grandparent Folder

Repeat the ../ to indicate that you want to go up two folders (rather than one), then follow it with the file name.

Example

To link to the homepage from the music reviews:

Home

To link to the homepage from the DVD reviews:

Home

 tsoupi@uic.edu email

mailto: - email link keyword tsoupi@uic.edu - email address

HTML- Opening Links in a New Window

 link to home page

Target - browser window _blank _new _parent _self

_top

List item
 List item
 List item
 List item
 List item
 List item
 Colered List closing tag

• • •

 link to specific list on the same page

HTML- Anchors

Index.html Ordered List opening tag List item Ordered List closing tag

references.html

 link to specific list on another page

HTML- Links

- Links are created using the <a> element.
- The <a> element uses the href attribute to indicate the page you are linking to.
- If you are linking to a page within your own site, it is best to use relative links rather than qualified URLs.
- You can create links to open email programs with an email address in the "to" field.
- You can use the id attribute to target elements within a page that can be linked to.

HTML- Images

```
<img src="photo.jpg">
```

```
Img –image tag
Src- source (file)
"photo.jpg" – Image file name
```

Height - attribute "300" - height value alt -text description

HTML- Image alignment (not supported in HMTL5)

align - align horizontally

topvertical alignment valuemiddlevertical alignment valuebottomvertical alignment value

- Save images in the right format (.jpg .png .gif ...)
- Save images in the right size
- Use the correct resolution (72 ppi)

HTML5- Images

```
<figure>
         <img src="photo.jpg" >
         <br />
   <figcaption>
         A caption of this image
   </figcaption>
</figure>
```

Information in a grid format

- Financial Reports
- Schedules
- Sport Results

Heading row 1, cell 2 </†r> row 2, cell 1 row 2, cell 2

How it looks in a browser: Heading row 1, cell 2 row 2, cell 1 row 2, cell 2

 - table tag - table row - table data - table heading

> School of Design

width – old attribute replaces by CSS height - old attribute replaces by CSS border - old attribute replaces by CSS bgcolor – background color old attribute

> >9am 10am 11am 12am (tr> Monday Geography Math Art > Tuesday Gym Home Ec

				RESUL	
	9am	10am	11am	12am	
Monday	Geography		Math	Art	
Tuesday	Gym			Home Ec

RESULT

	ABC	BBC	CNN
6pm - 7pm	Maula	Comedy	News
7pm - 8pm	Movie	Sport	Current Affairs

- The element is used to add tables to a web page.
- A table is drawn out row by row. Each row is created with the element.
- Inside each row there are a number of cells represented by the element (or if it is a header).
- You can make cells of a table span more than one row or column using the rowspan and colspan attributes.

HTML- Comments

<!-- This is a comment -->

School of Design

HTML5- Document

<section>

is a set of content that you could store as an individual record in a database

<section> <h1>Any level of heading</h1> The rest of the content </section>

It is still advisable to use a <div> to perform styling

HTML5- Document

<header> It is the head of a new section

Do not confuse with the <head> element

<header> is a group of introductory or navigational aids

Use the <header> at the start of your page or inside an <article>, as examples.

<footer>

represents the footer for the section it applies to Where you have a header, you may often find a footer that goes with it, again for the main page, or in a section or article, etc.

<section>

Section content appears here. <footer> Footer information for section. </footer> </section>

<article>

Use <article> when you have a page that is laid out like syndication. For example, course announcements, forum post, magazine article, etc.

<article>

<h1>Title</h1> paragraph information about the topic </article>

<article>

Use <article> when you have a page that is laid out like syndication. For example, course announcements, forum post, magazine article, etc.

<article>

<h1>Title</h1> paragraph information about the topic </article>
